Interests: sports, outdoor activities, art, self development, psychology, philosophy, science, cultures

Fun facts:
- Dancing since 12 years old, mostly street styles but also contemporary and latin dance classes. Considered following the passion professionally multiple times but changed my mind every time.
- Climbing since 20 years old, never considered following it professionally but love route setting so in a way it became a profession/ side job.
- Infinitely curious and interested in many things/ fields, hence all the different studies and jobs. This makes me a generalist who loves learning, exploring new ideas, and experimenting. Probably will never became a specialist in anything.
- Within IT I like working with machine learning and AI the most. I really enjoy exploring new tools and solutions and find a way to use them/ apply them in a real world scenario. I like building prototypes and demonstrate possibilities for future use cases. As with almost everything, within IT I also like to combine different aspects/ sub-domains and execute a project from data collection through model training to application development and deployment.

Values: kindness, honesty/ sincerity, responsibility, connection with others and seeing everybody as human

Strength: hard working, analytical, forward thinking

Weaknesses: impatient, complainer, stubborn

Ambition: aiming for a life where my job allows me to explore my hobbies both financially and time wise. Have a good work life balance where all aspects of my life are valued and everything I learn outside of working hours is recognized as beneficial. Have a job that allows me to combine my interests and different skills or have multiple jobs that balances between my interests. I want to keep on learning and exploring and use both my new and old knowledge to create something interesting, useful, or fun. Ideally be employed in a position where my abilities to learn and my curiosity is used.

Causes that are important for me: bettering the state of nature, promoting diversity and acceptance towards others
